## QuickField simulation report

## Non-concentric spheres capacitance

Finding the mutual capacitance between two spheres and comparison with analytical solution.

This automatically generated document consists of several sections, which specify the problem setup and finite element analysis simulation results. Navigation links in the top of each page lead to corresponding sections of this report.

Problem description and QuickField simulation files: https://quickfield.com/advanced/non-concentric spheres capacitance

## Problem info

Problem type: Electrostatics Geometry model class: Axisymmetric Problem database file names:

- Problem: non-concentric_spheres_capacitance.pbm
- Geometry: Non-concentric_spheres_model.mod
- Material Data: concentric_spheres_materials.des
- Material Data 2 (library): none
- Electric circuit: none

Results taken from other problems:

- none

## Geometry model

Problem info Geometry model Labelled Objects Results Nonlinear dependencies
Table 1 . Geometry model statistics

|  | With Label | Total |
| :--- | :--- | :--- |
| Blocks | 1 | 2 |
| Edges | 3 | 9 |
| Vertices | 2 | 8 |

Number of nodes: 16841.

## Labelled objects

There are following labelled objects in the geometry model (Material Data file could contain more labels, but only those labels that assigned to geometric objects are listed)

Detailed information about each label is listed below.

## Labelled objects: block "vacuum"

There are (2) objects with this label
Relative electric permittivity eps_x=1, eps_y=1

## Labelled objects: edge "boundary"

There are (2) objects with this label
Voltage $\mathrm{U}=0$ [V]

## Labelled objects: edge "sphere1"

There are (1) objects with this label
Floating conductor (equal voltage)

## Labelled objects: edge "sphere2"

There are (1) objects with this label
Floating conductor (equal voltage)

Labelled objects: vertex "-q"
There are (1) objects with this label
Electric charge q=-0.000000001 [C/m]

## Labelled objects: vertex "+q"

There are (1) objects with this label
Electric charge $\mathrm{q}=0.000000001[\mathrm{C} / \mathrm{m}]$

Problem info Geometry model Labelled Objects Results Nonlineardependencies

## Results

Field lines

## Results

Color map of Electric induction $|\mathrm{D}|[\mathrm{C} / \mathrm{m} 2]$

## Nonlinear dependencies

No non-linear dependencies are used in this problem data
